RFEYE ARRAY 300

DF & SPECTRUM MONITORING SYSTEM

High performance twin channel system for simultaneous wideband radiomonitoring and direction finding.

The Array 300 is an intermediate sized system for vehicle mounted deployment or fixed installations. It is available in two different receiver configurations based on the RFeye Node 100-8 with 100 MHz IBW and 8 GHz upper frequency, or Node 100-18 with 100 MHz IBW and 18 GHz upper frequency.

The Array 300 uses a unique multi-layer approach that is more sophisticated and versatile than traditional direction finding. High performance spiral directional antenna modules are optimized for different frequency bands and arranged in multiple orientations. The Array is sensitive to the majority of incoming signal polarizations including all linear polarizations, allowing reliable detection of signals including those invisible to most DF systems.

Timing and synchronization features enable combined AOA, TDOA and POA techniques allowing all signal types in the range to be mapped, irrespective of signal power, bandwidth or frequency.
